

Windows MySQL Workbench and Server Install:

Go to: <https://dev.mysql.com/downloads/workbench/>

NOTE: We are downloading and archived version of MySQL Workbench

Click the 'Archive' tab

The screenshot shows the MySQL Workbench download page. The 'General Availability (GA) Releases' tab is selected, and a red arrow points to the 'Archives' tab. Below the tabs, the title 'MySQL Workbench 26.7.0' is displayed. There are two dropdown menus: 'Select Version:' with '26.7.0' selected, and 'Select Operating System:' with 'macOS' selected.

Click the 'Download' button

The screenshot shows the MySQL Community Server 8.0.23 download page. The 'Select Operating System:' dropdown is set to 'Microsoft Windows'. Under 'Recommended Download:', there is a section for 'MySQL Installer for Windows' with a 'Go to Download Page >' button. Under 'Other Downloads:', there is a table with two rows. The first row is for 'Windows (x86, 64-bit), ZIP Archive' (8.0.23, 193.0M) with a 'Download' button. The second row is for 'Windows (x86, 64-bit), ZIP Archive Debug Binaries & Test Suite' (8.0.23, 441.5M) with a 'Download' button. A red box highlights the first row, and a red arrow points to the 'Download' button. At the bottom, there is a note: 'We suggest that you use the MD5 checksums and GnuPG signatures to verify the integrity of the packages you download.'

Click the 'No thanks, just start my download.' link if you see this window.

MySQL Community Downloads

Login Now or Sign Up for a free account.

An Oracle Web Account provides you with the following advantages:

- Fast access to MySQL software downloads
- Download technical White Papers and Presentations
- Post messages in the MySQL Discussion Forums
- Report and track bugs in the MySQL bug system

The screenshot shows the MySQL Community Downloads login/sign-up section. There are two buttons: 'Login »' (using my Oracle Web account) and 'Sign Up »' (for an Oracle Web account). Below the buttons, there is a paragraph: 'MySQL.com is using Oracle SSO for authentication. If you already have an Oracle Web account, click the Login link. Otherwise, you can sign up for a free account by clicking the Sign Up link and following the instructions.'

No thanks, just start my download.

Run the downloaded file and allow the app to make changes to your system.

You might be asked to allow updates, say no. You won't need update after this course.

Choose the 'Custom' option. Click 'Next'.

Click the plus sign next to 'MySQL Servers' and the plus sign next to 'MySQL Server' and then again next to 'MySQL Server 8.0' and click and highlight the latest version. Click the green arrow once it's highlighted to add it to the window on the right.

Collapse the expansions by clicking the minus signs.

Under Application find the latest MySQL Workbench and add it to the right window.

Under Documentation find the latest MySQL Documentation and add it to the right window.

So, you should now have at least all that is showing below and then click 'Next':

At this point **ONLY SOME OF YOU** will get a screen that looks like the image below. If you do, just click 'Execute' and it will add the Redistribution Patch that you need. Check the 'I agree to the license terms and conditions' and click 'Install'. Once it's installed click 'Next'.

Most will just get the following screen. Click 'Execute'.

It will begin installing each product. Once the status is Complete on them all, click 'Next'.

And 'Next' again on the 'Product Configuration' window.

If you don't see any of the following screenshots or your images don't match up, you may have missed part of what you need installed. Just finish up the installation as best you can and re-run it again click the "reconfigure" link to finish the install.

Leave all the defaults in the 'Type and Networking' window as well and click 'Next':

Leave the 'Use Strong Password...' default and click 'Next':

In this next window you need to add a root password that you should never forget. It can be super simple and easy to remember. Even the password, 'password' works. If you forget this password and get locked out of Workbench, it is a huge process to get back

in. So, keep it simple and easy to remember, and don't forget it. This won't be an industry server that needs to be secure. A simple password is fine.

Enter the password twice. No need to add a user. Click 'Check' and 'Next'.

The screenshot shows the 'MySQL Installer' window for 'MySQL Server 8.0.19'. The left sidebar contains a list of steps: 'High Availability', 'Type and Networking', 'Authentication Method', 'Accounts and Roles' (which is highlighted), 'Windows Service', and 'Apply Configuration'. The main area is titled 'Accounts and Roles' and contains the 'Root Account Password' section. It instructs the user to 'Enter the password for the root account. Please remember to store this password in a secure place.' Below this, there is a 'Current Root Password:' label followed by a text input field and a 'Check' button. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'.

Keep the defaults at the next window and click 'Next'.

The screenshot shows the 'MySQL Installer' window for 'MySQL Server 8.0.19'. The left sidebar is the same as the previous window, but 'Windows Service' is now highlighted. The main area is titled 'Windows Service' and contains the following options: a checked checkbox for 'Configure MySQL Server as a Windows Service', a section for 'Windows Service Details' with a text input field for 'Windows Service Name' containing 'MYSQL80' and a checked checkbox for 'Start the MySQL Server at System Startup', and a section for 'Run Windows Service as ...' with two radio button options: 'Standard System Account' (which is selected) and 'Custom User'. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'.

At the 'Apply Configuration' window click 'Execute'. It will check off the steps. Then click 'Finish'.

At the 'Product Configuration' window click 'Next'.

Then click 'Finish'.

Workbench is now installed. Open the program up if it didn't already open. You should see a Local Server instance like below:

This means your server was installed that is needed to run Workbench. This server will be running all the time, which shouldn't affect your computer. Remember you need it on to run Workbench properly. But if you need to ever turn it off for some reason, then click your Window icon  and just start typing 'services' and open the Services app. Scroll down to MySQL 80 and click it. You should see on the left an option to stop the server if you ever need to. It's a small link that says 'Stop'. I would suggest not clicking 'Stop' and just leave it running. Congrats you got it all installed.
